

GLUCOSENSE

How many of you know someone with diabetes?

Would you be willing to prick your finger multiple times a day to check your glucose levels?

What if I told you that glucose monitoring could be as easy as wearing a smartwatch?

Yes glucosense can!! so presenting u guys my startup idea based on “Non-Invasive Glucose Monitoring System” which is as easy to wear a smart watch with app and AI integration.

Slide1

Over 77 million people are suffering from diabetes in India and Globally about 537 million and it is expected that the projected statistics could reach upto 643 million by 2030.

According to the statistics it is not convenient for the majority of the diabetes patient to check their daily glucose level invasively as sometimes pricking is painful and also not pocket friendly.

So we need a non invasive solution which is not painful and cost efficient.

Slide2

Can you guess how much money an average diabetic spends annually on glucose testing?

Slide3

Glucosense can be paired with mobile application for user convenience, it employs NIR spectroscopy and AI algorithms for accurate and real time glucose + O2 measurement.

It can also be seamlessly connected with smartwatches and existing health application for enhanced user experience.

Slide4

So how glucosense works ??

Elaborate working mechanism from slide...

Rest slides : elaborate from slides

How many of you would be interested in trying a painless, affordable glucose monitoring device?

Would you invest in a technology that can help millions live healthier lives without inconvenience?

We're not just building a device; we're empowering millions to take control of their health. Let's make diabetes management effortless, affordable, and pain-free
